GIANT HYBRID BLUEBERRIES

ONCE PLANTED LAST A LIFETIME—Profitable and Ornamental

The Cultivated Blueberry produces juicy, delicious berries two to three times as large as common Blueberries, resembling in size a bunch of Delaware Grapes and selling for 40c to 60c a quart wholesale. They are beautiful ornamental bushes reaching 8 to 10 feet in height with pinkish white, bell-shaped blossoms, and long, narrow, dark green foliage that turns coppery red in fall. An improvement in every home planting.

Cross Pollenization: At least **two plants** should be planted for cross pollenization.

Every farm has an ideal location adapted for cultivated Blueberries; however, if not, home and commercial planting adaptations are easily created. The soil has to be moist, loose, and contain acid; after digging your hole, take the top soil and mix half and half with leaf mold, marsh soil, rotten straw or vegetable refuse, or Westhauser's Acid Gro-Kwick. We also recommend a handful of sulphate of ammonia around the plants in the spring. This can be purchased from your local feed or hardware store. Space plants 6 to 8 feet apart.

In our Michigan fruit belt, farmers are making big profits and are extensively planting large acreages. Get in on the big money!

2-yr. Blueberries, heavy rooted transplants, 8 to 12 inches. Prices: 2 for \$2.50; 4 for \$4.50; 12 for \$12.60.

FOR QUICK RESULTS

GIANT 5- and 6-YEAR TRANSPLANTS

Loaded with fruit buds, will fruit heavily first year. 6-year plants average 2 to 3 feet; 5-year plants, 2 feet and up. Considering Blueberries reach full fruiting stage at 9 years, these plants are well on their way, and often pay more than their cost the first year. These plants are packed in **Westhauser's Acid Gro-Kwick, Nitro-Organic Humus**, use it mixed with good rich top soil when planting.

PRICES: 5-yr. plants, \$4.00 each; 2 for \$7.90. 6-yr. plants, \$5.00 each; 2 for \$9.50.
